

TR4 Measurement device for up to 4 strings

In the case of control automatons with 0-20 mA analogue inputs distributed within a plant, **TR4** is the ideal control device, since it converts a maximum signal of 20 A in the primary, into a 0-20 mA process signal. **TR4** is a robust and powerful digital transducer which the user can use, along with the control automaton, to control the real time status of photovoltaic strings.

Main Features

Inputs/Outputs

- Four 20 A direct current inputs
- 8 voltage-free digital inputs (alarms)
- One 1000 V_{d.c.} input
- \bullet 230 $V_{a.c.}$ or 24 $V_{d.c.}$ power supply voltage

TECHNICAL FEATURES

| Construction features | |
|---------------------------|---|
| Box material | V0 self-extinguishing |
| Communications (TR8/TR16) | |
| Port / Protocol | RS-485 / Modbus/RTU |
| Environmental conditions | |
| Operating temperature | -20 + 50°C |
| Protection degree | IP 20 |
| Humidity (non-condensing) | 5% to 95% |
| Maximum altitude | 2000 m |
| Safety | |
| Type of insulation | Category III – 300 V _{a.c.} EN 61010 double-insulated electric shock protection class II |
| Standards | |

IEC 61010-1 :2001, IEC 60664-1 :2007, IEC 61000-6-2 :2005, IEC 61000-6-4 :2006, EN 55011 :2007 (For TR8 and TR16), EN 61010

It is extremely difficult to certify that a photovoltaic plant is at its maximum performance level, without controlling the primary generation sources that certify this. The **TR8** has been specifically designed to control strings in photovoltaic plants, providing real time information on the current level generated in the different sets and, as a result, information on the current flowing through the external sensors.

Main Features

Inputs/Outputs

- Eight 25 A and 100/200 A direct current inputs (Hall effect system)
- Connection of 2 M/TR transformer modules
- 8 voltage-free digital inputs (alarms)
- One 1000 V_{d.c.} input
- \bullet 230 $V_{a.c.}$ or 24 $V_{d.c.}$ power supply voltage

Communications

- 2 RS-485 Modbus/RTU communications ports
- Multi-Slave communications system (up to 8192 strings)

The **TR16** is a more advanced version of the **TR8** model. In addition to the main current measurement features, it also includes other useful features for large-scale photovoltaic installations such as the possibility of measuring the ambient temperature in each zone of the installation.

Main Features

Inputs/Outputs

- Sixteen 25/100/200 A direct current inputs (Hall effect system)
- Connection of up to 4 M/TR transformer modules
- 3 voltage-free digital inputs (alarms)
- One 1000 V_{d.c.} input
- 1 input for the temperature probe Pt100 or Pt1000 (selectable)
- One 0-20 mA analogue input
- \bullet 230 V_{a.c.} or 24 V_{d.c.} power supply voltage

Communications

- 2 RS-485 Modbus/RTU communications ports
- Multi-Slave communications system (up to 7680 strings)

Communications

The **PowerStudio** energy management software is used to display the different measurements for the devices from any point, therefore providing centralised management of the photovoltaic plant.

This software can be used to create all types of tables and graphics containing all the data collected from the installations.

Accessories

M/TR-25

M/TR-25 is the measurement module for 2 or 4 current circuits that use both TR8 and TR16 to measure currents up to 25 A_{de}

M/TR-100 M/TR-200

M/TR-100 / M/TR-200 are the measurement modules used by the TR8 to measure currents up to 100/200 A_{d.c.} depending on the type.
