ImportVar_Databox

Variable imported and stored in the platform,

Code: W10121.

Description

DataBox is an Industrial IoT platform for monitoring, control and analysis for facility management:

- Monitored variables
- Calculation of KPIs based on measured variables
- Alarm service. Generation, Warning, and Tracking
- Automatic Reporting
- Remote and local control and management of actions
- Visualization and control of parameters via widgets and dashboards
- Parameter comparisons over time or between installations
- SCADA synoptic screen which allows you to view a photograph or diagram and attach variables and links to widgets, dashboards, etc.
- Platform Customization/Branding (Name, DNS, and Background Image)

W10124.	API_Databox

All codes, with the exception of W10120. W10122. and W10124. correspond to monthly subscription prices. The prices for codes W10120. , W10122. are one-time purchase prices. The price of code W10124. corresponds to 25,000 calls. A reading is understood as a variable that is periodically recorded, an alarm as an expression that is continuously evaluated locally and reported, and an actuator as a pre-configured (manual or programmed) remote control action.
