

CUP Out 2, Transducer

Code: M25612. DESCATALOGADO

> Output type: 1,2,3

> Analog output: 0...20mA | 4...20mA

> Measure: Configurable

#### Description

The universal process transducers have been designed to adapt different process signals or to have a galvanic isolation between the input and output circuit.

The input and output can be configurated by the user.through internal jumpers. It is not necessary to adjust zero or span if the user decide to change the configuration.
