LM50-TCP+, Impulse centraliser

Code: M31566.   DESCATALOGADO

> Protocol: Modbus / TCP
> Módules: 8
> Communications: RS-485
> Digital inputs: 50

Description

Impulse centralizing unit, with up to 50 devices. The inputs of the centralizing unit are optocoupled to read the said impulses and it also has a memory to store up to 32 bits of data. It has two communications ports:

○ RS-485 Port: It can be used to connect up to 31 CIRCUTOR units that can be monitored with the **PowerStudio** software. This port acts as a gateway from Ethernet to RS-485

○ Ethernet 10Base / 100Base TX Port that can be used by the **PowerStudio** energy management software to carry out the read and write operations of the 50 inputs of the **LM**, and all other units in the RS-485 network.

Application

○ Reading of any device that emits impulses (up to 50 devices). These parameters are useful for generating bills or for specifying a price / unit cost

○ Integration with other consumption, such as: gas, water, etc. or simply to track the energy consumption of 50 meters

○ As an alarm centre: taking action based on the status of the device outputs, or triggering an alarm following a change in status
