It requires the following in the case of three-phase systems: 1 Power Net xx-xxx + 2 TC-Power Net xx-xxx. The Power Net system is based on the installation of a master unit (Power Net), with which the measurement is taken in the 3 voltage and neutral phases, and the L1 current is measured. To measure current L2 and L3, install 2 TC-Power Net units connected to the master unit. They feature RS-485 communications, using the Modbus/RTU protocol.
