### Description

**CVM NET** is a Power Analyzer for measuring balanced or unbalanced single and three-phase networks. It has been specifically designed for measuring up to 230 electrical parameters and for transmitting this data through the RS-485 communication bus with the Modbus/RTU protocol to the supervision SCADA.

Its main features are:

- o DIN rail format of only 3 modules
- o Mounted on 72 x 72 mm panel, with adapter front panel (M5ZZF1)
- o Measures the current with ... / 5 A and .../250 mA external transformers (**MC** model), .../333 mV
- o Possibility of measuring Medium and Low Voltage networks
- o RS-485 communication (Modbus RTU)
- o Compatible with **PowerStudio / PSS / PSSDeluxe software**
- o 2 programmable digital outputs
- o Universal power supply (optional)
- o Sealable

### Application

- o Control application on switchboards and low and medium voltage connection points, where an analyzer must be installed on a DIN rail due to space restrictions.
- o Alarm control. Maximum value, minimum value and programmable delay.
- o Control of active or reactive energy using the impulse output
- o Instantaneous data capture, maximum and minimum values of the electrical parameters measured.
