Description

Three-phase power analyzer (balanced and unbalanced) for assembly on DIN rail, very small, with 4-quadrant measurements and integrated memory for data logging.

Main features include:

- Current measurement (depending on model) .../5 or.../1 A or.../250 mA or Rogowski-type sensors.
- · Wi-Fi and Ethernet communications (Modbus TCP/IP).
- · Integrated memory.
- $\boldsymbol{\cdot}$ With web Server to view, configure and download data.
- · Compatible with the MyConfig app.
- · Sealable with terminal cover.
- Display of THD% and up to the 31st harmonic (V, A).
- DIN rail format just 3 modules wide.
- · High-contrast backlit display.
- 72 x 72 mm panel mount with front adapter

Application

- · Control application in distribution panels and low- and medium-voltage connections where an analyzer has to be installed on the DIN rail due to space constraints.
- · Alarm control: Maximum value, minimum, delay and programmable interlocking.
- · Logging of active or capacitive and inductive reactive energy.
- \cdot Capture and storage of instantaneous, maximum and minimum data of the electrical parameters measured.
