Description

Three-phase power analyzer (balanced and unbalanced) for assembly on DIN rail, very small, with 4-quadrant measurements and integrated memory for data logging.

Main features include:

· Current measurement (depending on model) .../5 or.../1 A or.../250 mA or Rogowski-type sensors.
· Wi-Fi and Ethernet communications (Modbus TCP/IP).
· Integrated memory.
· With web Server to view, configure and download data.
· Compatible with the MyConfig app.
· Sealable with terminal cover.
· Display of THD% and up to the 31st harmonic (V, A).
· DIN rail format just 3 modules wide.
· High-contrast backlit display.
· 72 x 72 mm panel mount with front adapter

Application

· Control application in distribution panels and low- and medium-voltage connections where an analyzer has to be installed on the DIN rail due to space constraints.
· Alarm control: Maximum value, minimum, delay and programmable interlocking.
· Logging of active or capacitive and inductive reactive energy.
· Capture and storage of instantaneous, maximum and minimum data of the electrical parameters measured.
