

air GATEWAY

air GATEWAY

Code: M62001. **DESCATALOGADO**

> Router RS485 Modbus/RTU to Radio

Description

The airGateway is an RS485 to radio interface using Modbus protocol. Its purpose is to interface between an external supervisor and an “airLINK” network (using ZigBee compatible protocol). Its role in the network is as coordinator, i.e. it forms an active part of creating the network and maintaining wireless traffic from and to other similar devices. Furthermore it can also work as parent or master device for battery supplied sensors of the same family “airLINK”.
