air THL

air THL

Code: M62004.   DESCATALOGADO

> Wireless temperature, relative humidity and brightness analyzer

Description

The airTHL is a device including a temperature sensor, a humidity sensor and a light sensor. The device acquires data from the sensors and transmits them via radio to a coordinator hub (airGATEWAY or other compatible device). This device belongs to the family called "airLINK" and sends, via radio, the acquired data to an airGATEWAY device at regular and programmable intervals of time. The device allows the user to set adjustable thresholds for the different variables and allows the generation of different alarms if a threshold is exceeded.

air THL

Code: M62004.
