Description

Electronic residual current protection and monitoring relay (**IEC 62020**) compatible with the protection transformers of the **WGC-TB** series. The **RGU-10B** is the most complete system for monitoring and controlling electrical insulation of type-B installations (**IEC 60755**).

- Electronic relay with relay output.
- Measures in AC, DC or mixed current, type B (**IEC 60755**)
- Measures the intensity of the current by connecting to an residual current transformer of the **WGC-TB**
- Programmable with backlit LCD display:
 - Trip current (red display when tripped)
 - Parameter programming
 - Instantaneous leakage current
 - Disconnection of external transformer
- Status signalling via 2 LEDs
- Features two independent programmable outputs (main and prealarm).
- Includes a remote-control input.
- Assembly on **DIN 46277** rail (**EN 50022**), 3 modules.

Application

Monitoring of the electrical insulation in:

- Single or three-phase AC installations, AC installations with DC components or purely DC installations. With frequencies of up to 1 kHz.

Such as, for example:

- Speed drives
- UPS (Uninterruptible Power Supply systems)
- Photovoltaic installations
- Motor control devices, etc.
