Description

The residual current current intensity monitoring and protection relay (**IEC 62020**), compatible with the **WGB** series, for type B loads (**IEC 60755**) and with 4 totally independent channels.

High-performance relay with the following main features and functions:

- Electronic relay with relay output (up to 4 channels)
- Measures in alternating, continuous or mixed current (Type B according to **IEC 60755**)
- It measures and displays the current intensity of each of the 4 channels independently, through the connection to the **WGB**-series residual current transformer.
- Fully programmable with display showing instantaneous leakage current in real time on a high-contrast backlight display (display turns red when the relay trips).
- Integrated RS-485 (Modbus) communications
- Pre-alarm relay
- Event log
- Remote control input.

Application

Residual current protection or monitoring of single-phase or three-phase electrical loads in alternating current with continuous components, with frequencies up to 2 kHz, such as:

- Variable speed drives
- UPS
- Photovoltaic Installations
- Electric Vehicle Charging
- Active filters
