

MT-TSD-630A-4P, Motorised circuit-breaker suitable for residual current protection, 4 poles

Code: P20K76.

> Poles: 4 > In (A): 630 A

Description

MT-TSD series automatic switch with remote control for currents from 80 to 630A, with both 3 and 4 poles. Provides short-circuit and overload protection, and is also used as a circuit breaker, as it features a trigger coil for use with a differential relay.

The switch can be reconnected in two ways, depending on how the operation mode is set in the motor group:

- o "MANU": done manually on the switch itself by turning it to OFF and then ON.
- o "AUTO": done by means of an electrical impulse that follows the OFF-ON sequence.

Application

The MT-TSD series are motorized automatic switches that can be operated remotely and are valid for any application that requires remote connection/disconnection.

They are also used as a circuit breaker associated with automatic reclosing relays, such as the RGU-10 MT. They are an essential complement to provide overcurrent and earth leakage protection with automatic reclosing.

Motorised circuit-breaker suitable for residual current protection

Code: P20K76.
