### Description

#### Description

The **REC4** is a family of 2- or 4-pole RCCBs linked to a smart reclosing motor, which makes it possible to safely reclose the corresponding RCCB. The **REC4-C** version offers the option of signalling that the maximum number of reconnections has been reached by means of a status output.

Compact device that is installed as an RCCB. There is no need to interconnect the motor and the RCCB.

The reconnection system is time-based. The device has a locking system to control operation in manual or automatic mode (reclosing enabled).

### Application

All electrical installations needing a full, continuous power supply faced with unforeseen incidents not caused by electric insulation which cause the RCCB to trip.

- Housing sector: refrigerators, alarms, garage doors
- Services sector: air conditioning, cold storage rooms, lighting, UPS, etc.
- Industry sector: control of critical production processes
