Cir-SET 421

,

Code: QS421

Description

The **Cir-SET 421 / 424** is a three-phase static recorder for measuring electrical values such as voltage, current, power, active energy and reactive energy with the possibility of Ethernet, RS-232 and RS-485 communications.

Cir-SET 421 / 424 adapts new technologies to offer great versatility in programming, communications and expansion modules, resulting in a meter adaptable to any user need.

Application

Cir-SET 421 / 424 is a 4-quadrant logger (consumption and generation), suitable for installation in electrical substations.
The equipment offers 8 or 16 configurable variables to be stored in its internal memory (18,000 or 9,000 registers), in addition to multiple instantaneous registers through the Modbus RTU protocol.
