Description

CIRCUTOR has designed a new range of outdoor charging posts with a new aesthetic design that combines an attractive appearance with safe, reliable and robust construction. Outdoor posts have to be capable of withstanding a wide range of environmental conditions and possible acts of vandalism, while simplifying the installation and maintenance processes for operators. The **URBAN** posts reduce installation time and simplify operations and maintenance tasks.

The **URBAN** devices facilitate charging tasks for all kinds of EV users, incorporating all the electrical protections needed to guarantee safety inside an aluminium metal body. They come with Type-2, mode-3 single-phase or three-phase plugs, depending on the configuration chosen. The **URBAN 10** is designed for locations where simple Plug & Charge operations are required.

Application

URBAN charging posts are especially suited for all types of outdoor parking areas where electric vehicles are parked and charged. Its applications range from public roads and squares, to outdoor car parks at department stores, airport terminals, vehicle sales and rental companies, company employee car parks, etc.
