Digital Link SIM VPN WW - Single

,

Code: W10312.

Description

In industry, infrastructure or buildings, efficiency and reliability are key. **Scout** complements your Circutor devices, offering remote access and autonomous analysis of your electrical data, highlighting only the essentials.
Control multiple facilities and collaborate in real time, with no technical complications. Maintain control, optimize performance and manage your facilities quickly and efficiently.

Main features

Monitoring and visualization

· Quick and easy connection with no complex configurations
· Remote access for configuration and firmware updates
· Dynamic dashboards with real-time metrics and trends
. Push notifications from the mobile app to stay informed at all times

Analysis and focus

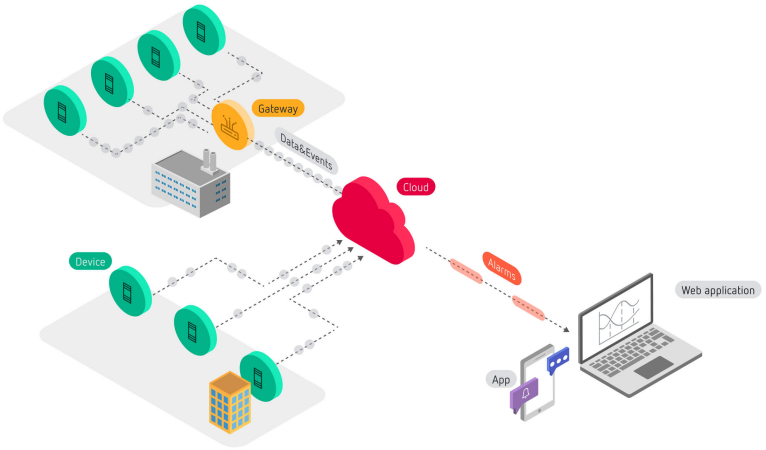
· Continuous automatic analysis of electrical data
· Filtering and prioritization of relevant events
· Contextual information to understand the "what" and the "why"
· Detection of key patterns and deviations to anticipate problems

Communication and reporting

· Integrated collaborative tools for teamwork
· Real-time chat for incidents and analysis
· Rapid generation of standard and custom reports
· Automated sending of periodic reports

Secure and easy multi-site monitoring

· Centralized management of multiple facilities from a single platform
· Secure and encrypted connection for data protection
· **ISO 27001** certification for maximum confidence and compliance
· Open and documented API for integration with external systems



Digital Link SIM VPN WW - Single

Electrical monitoring and auditing software

Code: W10312.

Application

Scout offers a variety of specialized modules, each focused on a key aspect of facility monitoring.

Digital Link

Digitize your infrastructure without complications.
Avoid travel by accessing your devices remotely. Monitor key metrics and analyse data in the cloud with no technical complications. Integrate with your tools using our API as needed.

- View, configure and update your devices remotely.
- Dynamic dashboards for monitoring.
- Detailed analyses with comparative charts, and real-time communications with your team.
- Open API to integrate your data with your workflows.

Ideal for

- Industry: Remote monitoring and maintenance with no technical complications.
- Buildings and infrastructure. Centralized data for better management without the need for additional infrastructure.
- Installers and integrators. Simple and scalable solution for your customers without worrying about protocols, architectures or firewalls.

Compatible devices

- QNA-600-D
- QNA-D500
- CVM-D50-xx
- CVM-D4xx
- Computer C Wi-Fi
- Computer SMART III + SmartLink-VAR gateway
- R-SABT
- Via Line-EDS-cloud, compatible with any Circutor device with an RS-485 or Ethernet connection and Modbus protocol.
