

Scout VAR

VAR_Scout

Code: W10340.

Description

In industrial settings, managing facilities and converting large volumes of data into useful information is a constant challenge.

Scout transforms the data from your installations into alerts provided using an advanced analysis system. Centralize information and streamline decision-making on a single collaborative platform, guaranteeing quick and effective responses. It also offers specialized analysis tools and a mobile app to keep you informed and in control from anywhere.

Main characteristics:

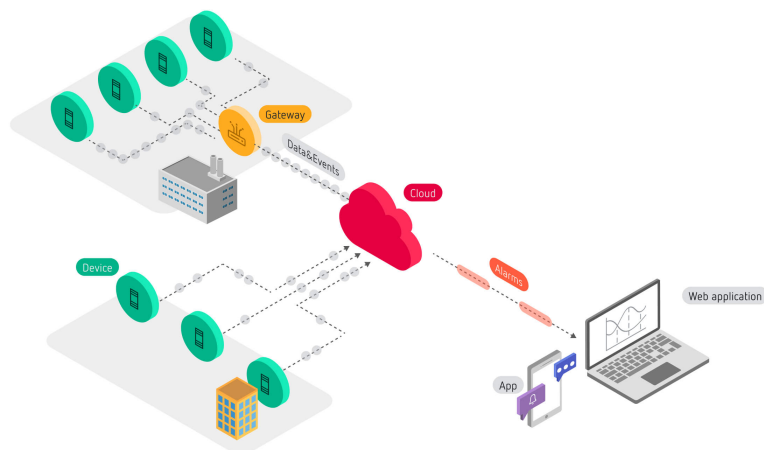

- **Multi-site monitoring**
Manage and monitor multiple installations from a single platform. Consolidate all the information in one place for a comprehensive overview.
- **Prioritized alerts**
Receive alerts generated from an advanced data analysis to focus quickly on the most critical problems.
- **Clear and contextualized information**
Each alert includes relevant information and recommendations so you can take informed decisions and deal with any issues efficiently.
- **Collaborative communication and analysis tool**
Use real-time chats and specialized analysis tools in independent spaces to collaborate and share information with your team.
- **Mobile app**
Manage alerts and collaborate in real time from anywhere with instant notifications and access to detailed information in the mobile app (Android and iOS).
- **Generation of advanced reports**
Create and share clear and structured reports based on the data from your facilities.
- **Easy to implement**
Integrate devices into the platform easily using a unique identifier, and start monitoring in minutes.
- **Maximum end-to-end security**
Trust top-tier ISO 27001-certified cloud providers, with robust privacy policies to protect your information.
- **Flexibility and scalability in the cloud**
Adapt the capacity based on your needs with a fast-implementing platform to ensure unlimited growth.
- **Interoperability**
Connect to your existing tools using an open and documented API to improve your workflows.

Scout VAR

VAR_Scout

Electrical monitoring and auditing software

Code: W10340.

Application

Scout offers a variety of specialized modules, each focused on a key aspect of facility monitoring.

VAR_Scout: Monitor and oversee the operation and status of your capacitor bank.

Capacitor banks are essential to correct a low power factor in your installation.

The **VAR** module ensures optimal performance and keeps the power factor within the appropriate levels, helping to avoid penalties and improving energy efficiency.

Receive alerts on the power factor and battery performance, with detailed information to facilitate preventive maintenance. You can also send periodic power factor reports to any users you choose.

Ideal for: Maintenance managers, companies involved in the installation and/or maintenance of capacitor banks.

- Installation/maintenance companies: Improved service with real-time monitoring and an overview of the battery system.
- Industry: Power factor control to avoid reactive energy penalties.
- Data Centres: Avoid possible penalties on the invoice, improve the energy efficiency of the centre and respond proactively for maximum effectiveness.

Compatible devices:

All capacitor banks that have the **Computer C Wi-Fi** regulator or the **Computer Smart III** connected to the converter SmartLink-VAR.
