

PV-Monitor-M

PV-Monitor-M, Datalogger for photovoltaic installations with meteorological monitoring system,

Code: E8110*. DESCATALOGADO

Description

The **PV-Monitor-M** is an energy management device designed to monitor instantaneous self-consumption from photovoltaic installations. To this end, it comprises an inbuilt datalogger, web server with **Embedded PowerStudio** and a SCADA application.

The device provides real-time information on photovoltaic production, energy savings and consumption in a building, home, company, etc., as well as storing historical data for periodic analysis.

It is also equipped with a MET probe to measure the PV module's solar radiation, plus its ambient and surface temperatures, the data obtained being used to calculate the installation's performance.

The **PV-Monitor-M** offers the following advantages:

- O Detection of low performance ratio (yield index) in the PV installation
- o Instantaneous energy balance of consumption compared to PV generation
- o Self-consumption percentage calculation for the current month (solar fraction)
- o General alarms in the PV installation to notify
- o of any anomalous operation (e-mail alerts)
- o Reduction in energy consumed from the electrical network
- Reduction in CO₂ emissions released into the atmosphere.

Application

- o Photovoltaic installations for self-consumption (with or without injection into the electricity grid)
- Remote energy balance monitoring and recording system (with or without injection into the electricity grid).

PV-Monitor-M

Photovoltaic monitoring datalogger

Code: E8110*.

Specifications

Mechanical characteristics

| Size (mm) width x height x depth | 105 x 90 x 70 (mm) |
|----------------------------------|--------------------|
| Weight (kg) | 0,3 |
