- > Mounting: DIN rail

Description

The line-EDS-cloud is a gateway designed to integrate field devices with monitoring and telemanagement systems located in the cloud. This module allows reading the variables from any Modbus device (TCP or RTU) on the market and upload them to cloud platforms, such as AmazonWebServices, Google platform or Azure.

By programming the device, you can incorporate any actuating logic for analogue or digital outputs, allowing you to create an automated management system that performs actions based on the input signals.

The device can be connected via cabled (Ethernet) or wireless (Wi-Fi) networks.

Application

This device can be used to measure and control any installation, integrating it into cloud platforms:

- o Azure
- o AWS
- O Google Cloud
- o Cloud API's

Efficiency Data Server

Code: M61055.
