

CMBUS-8

CMBUS-8, Conversor de M-Bus para Modbus,

Código: M540A0. DESCATALOGADO

Descrição

CMBUS protocol transducers enable devices with RS-485 Modbus Master communications to communicate with different M-BUS slave units.

There are two unit models:

- The CMBUS-8 model can communicate with 8 slave units (100 parameters).
- o The CMBUS-24 model can communicate with 24 slave units (500 parameters)

Aplicativo

In Northern and Central European installations there are many devices that log consumption, equipped with M-BUS communications protocols or interfaces. These equipments measure cold and hot water consumption, as well steam, gas, electricity, etc. Said equipments deliver characteristic parameters of the systems they control, such as, water temperature, volume, flow, pressure or electrical energy consumption, as well as the more basic parameters of an electrical network.

The **M-BUS** (BUS-Meter) protocol is a communications system for reading energy meters that has been designed to automate data collection by remote control or computer programs.

CMBUS-8

Conversor de M-Bus a Modbus

Código: M540A0.

Especificações

Alimentação em corrente contínua		
Consumo	55 mA	
Tensão nominal	18 30 Vcc	
Características mecânicas		
Tamanho (mm) larg. x alt. x prof.	17.5 x 90 x 58 (mm)	
Peso (kg)	0,065	

CMBUS

Conversor de M-Bus a Modbus.
